To express the potential, I initially planned to place Kaipatiki as a passive reserve and the building as an active zone. But the project is so much more than that. Kaipatiki is a well-known organism that has evolved with the history of the city and is loved by all. Our proposal is to express this as a new organism that can be applied to similar sites in Auckland. The Kaipatiki Project is about understanding the site, and it’s not just about architecture. It’s about the environment, urban planning, and the community.

**Adrian Kumar**

The Kaipatiki Project is a complex system that is not only about architecture. It’s about understanding the site, the environment, and the community. Our proposal for the Kaipatiki Project is to express this as a new organism that can be applied to similar sites in Auckland. The Kaipatiki Project is about understanding the site, and it’s not just about architecture. It’s about the environment, urban planning, and the community.
